

Crabs in the Classroom Teacher Workshop

The Coastal Discovery Museum would like to invite you to participate in the 2024-2025 Crabs in the Classroom program.

Horseshoe Crabs are fascinating creatures that have successfully survived in the ocean for millions of years. The Crabs in the Classroom program provides and opportunity for you to learn more about these amazing creatures, raise horseshoe crabs in your classroom, and educate your students using the provided curriculum.

Please join us at the Coastal Discovery Museum on **Thursday, April 25th, 2024** from **8:30am–2:30pm** for the Crabs in the Classroom teacher workshop. During this workshop you will learn about horseshoe crab (HSC) life history and management, receive HSC curriculum, tank supplies, HSC eggs, and learn how to care for your horseshoe crabs. Yes! You, and your students, will be raising horseshoe crabs in your classroom for a year (or more)!

There is no fee for this workshop or your starter HSC tank & supplies thanks to The Bargain Box. There are some additional responsibilities which include caring for your crabs for a full year and purchasing two 5-gallon buckets, HSC food, and additional marine salt for your tank.

We hope you decide to participate in this fun and educational experience!

Registration is required and space is limited so please register as soon as possible.

To register please contact:
